SQL Queries - Pizza Sales

A. KPI's

1. Total Revenue:

```
SELECT SUM(total_price) FROM pizza_sales;
```

Results		Messages

1	817860.05083847	

2. Average Order Value (AOV):

```
SELECT
    SUM(total_price) AS total_revenue,

order_id), 2) AS AOV
FROM pizza_sales;
```

	total_revenue	total_orders	AOV
1	817860.05083847	21350	38.31

- **Note** - Since each row represents a pizza and not an order, I used total revenue divided by distinct order count to correctly calculate AOV.
