

PIZZA SALES DATA ANALYSIS

SQL-Based Business Insights & KPI Analysis

**IN THIS PROJECT, WE AIM
TO SOLVE KEY BUSINESS
PROBLEMS USING
DATA ANALYSIS**

PROBLEM STATEMENT

KPI REQUIREMENTS

We aim to analyze key performance indicators (KPIs) from the pizza sales dataset to gain actionable insights into business performance.

The primary objective is to compute and evaluate the following metrics:

1. **Total Revenue:**

Total income generated from all pizza orders.

2. **Average Order Value (AOV):**

Average amount spent per order

3. **Total Pizzas Sold:**

Total quantity of pizzas sold across all orders.

4. **Total Orders:**

Total number of customer orders placed.

5. **Average Pizzas Per Order:**

Average number of pizzas per order

PROBLEM STATEMENT

CHART REQUIREMENTS

To better understand trends and patterns, we will visualize the following:

1. **Daily Trend for Total Orders:**
Analyze how order volume changes across different days of the week.
2. **Hourly Trend for Orders:**
Identify peak hours of customer activity.
3. **Percentage of Sales by Pizza Category:**
Contribution of each category (e.g., Classic, Veggie, Chicken).
4. **Percentage of Sales by Pizza Size:**
Distribution of sales across different pizza sizes.
5. **Total Pizzas Sold by Category:**
Compare quantity sold across categories.

PROBLEM STATEMENT

ADDITIONAL ANALYSIS

To derive deeper business insights, we will identify:

1. **Top 5 Best-Selling Pizzas:**
Based on total quantity sold.
2. **Bottom 5 Worst-Selling Pizzas:**
Based on lowest sales volume.
3. **Revenue Contribution by Pizza Type:**
Identify which pizzas generate the most revenue.
4. **Top 5 Highest Value Orders:**
orders with the highest spending value.
